

QUALITY POLICY

BEKK was formed in December 2001 to provide high quality services to both the underground and underwater industries. BEKK has adopted a policy to ensure the implementation and maintenance of a Quality Management System conforming to ISO 9001:2008.

The quality objective of BEKK is to continually improve overall performance so that customers can be provided with a service that ensures safety, reliability and value in all contracts undertaken by the company.

The Quality Manual, Procedures and Quality Plans form the "Keystone" of BEKK's principle, to hand over a quality product built in accordance with codes, specifications and clients engineering practices.

The Company Quality Management System is fundamental in the training of all employees and during induction of new employees. This ensures that the policy is understood, implemented and maintained at all levels of the organisation.

It is our policy to;

- ▶ Provide superior service to our clients by understanding and responding to their needs and expectations
- ▶ Systematically manage our projects to maximise value for all stakeholders
- ▶ Identify and comply with all relevant laws, regulations and contractual obligations
- ▶ Assign sufficient resources to enable us to provide the desired level of service to our clients and achieve the required quality standards
- ▶ Provide appropriate training for our employees and subcontractors to improve our service to clients and project delivery
- ▶ Set targets and review results on a regular basis with the aim of continuously improving our performance
- ▶ Maintain ISO 9001 certification of our management system

Our operations in Hong Kong have obtained certification under international standard ISO 9001:2008 for their Quality Management System with LRQA UKAS and LRQA HKAS. Certificate No. HKG0051005.
